Magic House

Starter:
https://scratch.mit.edu/projects/1288181085/editor

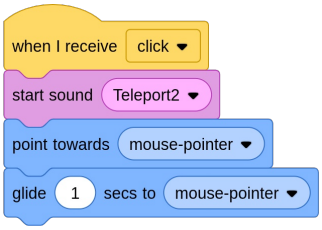
Don't forget to remix and rename.

1 In this project you will use the magic wand to cast some spells on other sprites. Each of the sprites has a script to put it in the right place to start.
Look in the **stage** and see the script that checks when you click the mouse.

- When you click the mouse the stage broadcasts the 'click' message.

2 In the **Magic Wand** sprite create a script so that it will fly over to where the mouse is clicked. When the wand receives the 'click' message;

- Play a sound.
- Point towards the mouse pointer.
- Glide to the mouse pointer.



3 Now to cast a spell on the toad, who is really the witch in disguise. So in the **Witch** sprite;

- Check when the sprite is clicked and send the 'click' message.
- Wait until the wand touches her and then change the costume to become the witch.
- After changing into the witch she will need to grow and move a bit upwards by changing her y-position. This is done by the **repeat** block. Try different numbers if you want her to grow faster or slower.

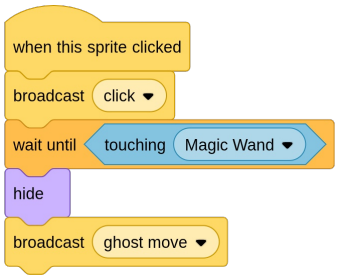
Notice that ...

- The same 'click' message is used everywhere.
- It doesn't matter whether the stage or a sprite sends it - the wand reacts the same way.

4 The **wizard** is disguised as a hat. Write a new script for him so that he appears in the same way as the witch.
The wizard has a 'laugh' sound instead of a 'sneeze' (but you can use whichever sounds you like).

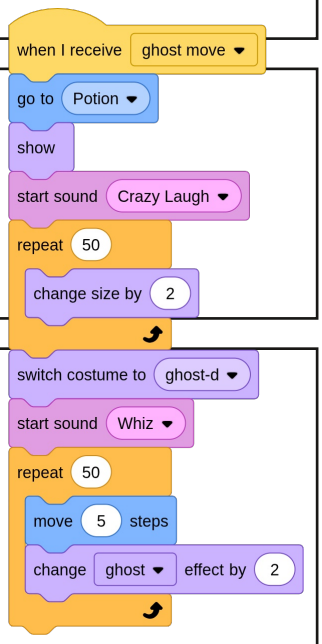
5 If you look closely you will see some potions on the table. One of them has a ghost inside it! This time, when the **Potion** sprite is clicked it will send a message to another sprite, the **Ghost**, to do something. So in the **Potion** sprite;

- When the sprite is clicked broadcast the 'click' message.
- When the wand touches the potion hide and broadcast a new message, 'ghost move'.



6 Now to get the Ghost to burst out of the bottle. Give it a new script;

- When it receives the 'ghost move' message go to the potion and show itself.
- Grow using the **repeat block.**
- Then glide off and fade away using the **ghost** effect.

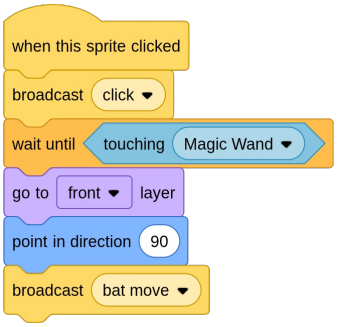


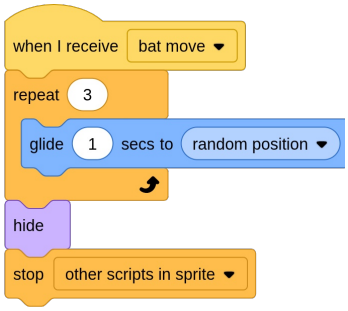
7 There is a **Bat** hiding at the top. When it is disturbed it will wake up and fly around. The bat will do two things at once. We can do this by broadcasting a message to **itself.**

- When the bat is clicked, broadcast the 'click' message to the wand.
- Then broadcast a new message, 'bat move'.

After this, create two more scripts when receiving the 'bat move' message;

- Fly to a few random positions.
- Flap the wings and grow. This will look as though it is flying towards you.





8 What can you add? Here are some ideas;

- The bat has a sound. Can you use it while it is flying?
- What can you do with the other costumes the witch and wizard have?
- The sprites could act differently if other things have been done first.
- What other magical things can you add to the room?
